

Store Walks are the ideal way to gather and share vital information about your stores and ensure compliance. However, walking every store location and collecting store details involves excess travel time, expenses, and staff.

AccuStore Virtual Store Walkthroughs helps overcome the challenges associated with traditional store walks. Capture the details you need with a 360-degree panoramic view that lets you virtually walk through your stores as if you were on site. Establish brand standards, design in-store layouts, develop construction remodel requirements, and accurately verify physical details along with fixture dimensions. What's more, the technology is integrated with your AccuStore store profiles.

“VIRTUALLY” ACCOMPLISH MORE

Complement structured profile data with visual references while digitizing each store location - conveniently manage it all online.

Improve collaboration between construction teams, third-party contractors, real estate, and merchandising teams with fully interactive views of each store.

Manage your brand, train employees faster, and verify compliance for store remodels and openings.

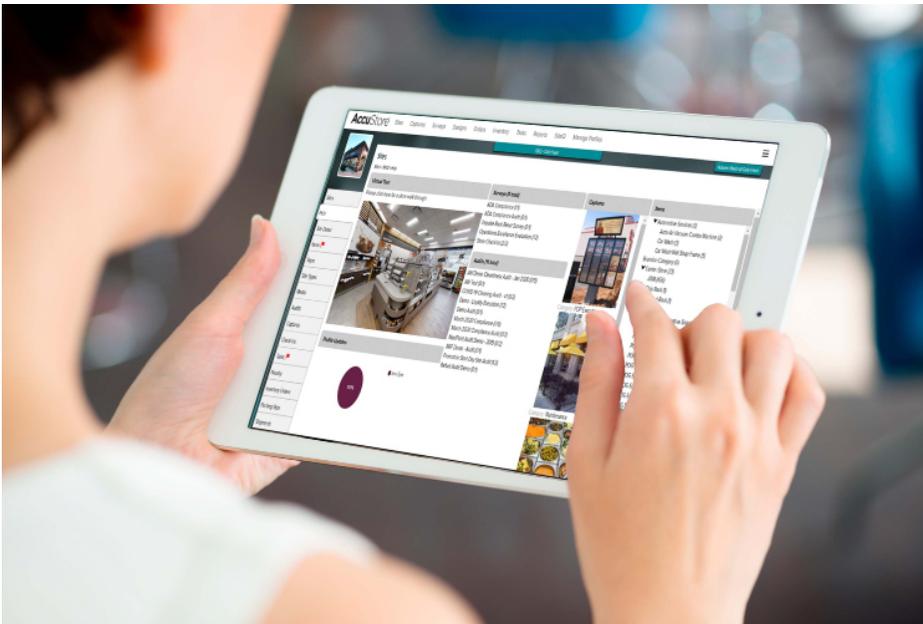

Increase speed to market with clear-cut physical details and measurements required for new construction, remodeling, or rebranding store sites.

YOUR SURVEYS FROM START TO FINISH

Surveys are captured through a series of 360-degree scans. Each scan takes about 30 seconds. An average retail space of 2,000-3,500 square feet can be done in two hours on site. The surveyor sets up the camera, which scans and rotates 360-degrees, every 6-8 feet throughout the floor plan.

Once complete, your scans are uploaded to AccuStore's hub page. These surveys add precise dimensional store data to the AccuStore database for space planning along with augmenting traditional question-based online surveys.

VIRTUAL WALKTHROUGH VIEWS

360-degree views ensure brand standards are met, construction remodels are complete, and identify fixtures that require products or merchandising.

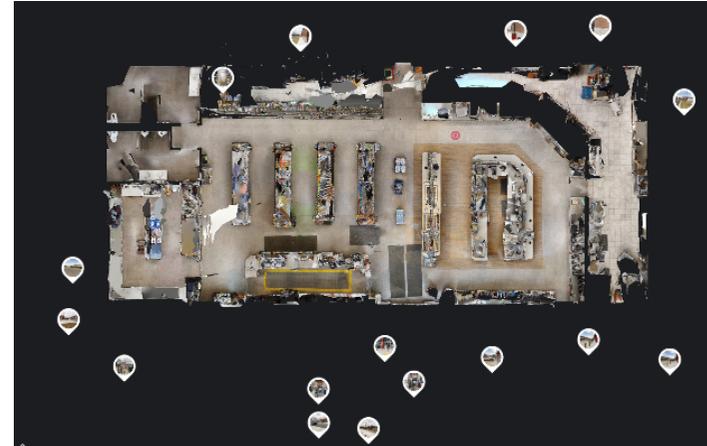

The measurement tool helps with quick reference for small remodeling projects or producing marketing collateral.

Exterior views allow you to observe nearby businesses from street view along with your store front and assets.

Floor plan views give you a bird's-eye view of store layout with ability to drill down into areas for a closer look.

Schematic floor plans provide a black and white floor plan view of the retail space - an ideal starting point for construction remodels or acquisitions.
